EXECUTIVE SUMMARY

Software Engineer with 3+ years of professional experience, actively transitioning into AI Engineering and Automation. Hands-on experience architecting n8n automation pipelines integrated with AI image/video generation for affiliate marketing, and deploying the Hermes AI Agent suite for autonomous trading, ad automation, social publishing, and web security auditing. Holds multiple certifications in AI, Python, Machine Learning, and Deep Learning. Strong foundation in Android engineering (Kotlin/Java, MVVM, Clean Architecture) reinforces end-to-end system design thinking and production-grade development practices.

WORK EXPERIENCE

AI & Frontend Engineer — Kerja Web3 *June 2026 – Present*

Tangerang, Banten, Indonesia · On-site

- Engineered and deployed a suite of specialized Hermes AI Agents — including an autonomous trading agent for real-time market signal detection, an auto-ads agent for automated campaign management, and an auto-tweet agent for scheduled social content publishing.
- Built and shipped a web security & audit AI agent capable of automated vulnerability scanning and security assessment reporting for client web applications.
- Developed high-performance client websites using Next.js, integrating GSAP and Lenis to deliver smooth-scroll, motion-rich frontend experiences.
- Partnered cross-functionally to translate business requirements into production-ready AI-driven and frontend solutions, owning delivery end-to-end from concept to deployment.

Android & Web Developer — Freelance — Yogyakarta, Indonesia *October 2021 – May 2026*

- Delivered multiple production Android applications across diverse domains including news aggregation, attendance tracking, Point of Sale systems, and AR e-commerce.
- Managed and developed responsive company profile websites for multiple clients (Resa Variasi, Ryga Adventure, Batik Tiara) with custom animations and optimized performance.
- Consistently applied MVVM architecture, Retrofit, Kotlin Coroutines, and LiveData across all Android projects for clean, maintainable codebases.

Android Developer — Klik Dokter — Jakarta, Indonesia *May 2021 – October 2021*

- Practiced full SDLC with Scrum, actively participating in sprint ceremonies and consistently delivering features on schedule.
- Successfully migrated 6–7 application modules from Java to Kotlin Native Android, improving maintainability and performance within sprint deadlines.
- Integrated Kotlin-based RESTful APIs using Retrofit and collaborated using Git for clean version control across the engineering team.

Android Developer — Agree (Telkom Indonesia) — Jakarta, Indonesia *November 2020 – April 2021*

- Developed a fisherman and cultivator management system using Kotlin with MVVM architecture and ViewModel for operational and financial tracking.
- Studied and implemented RxJava and Kotlin Coroutines within Telkom Indonesia's existing codebase for seamless system integration.
- Delivered 5 features end-to-end across agricultural management and financial modules, all merged to production within Agile sprint cycles.

Android Developer — Komerce — Purbalingga, Indonesia *June 2020 – October 2020*

- Developed an Employee Attendance Management System using Android native with LiveData for real-time UI updates.
- Built and shipped 3 core features: check-in/check-out, location-based validation, and automated data storage.

Android Developer (Intern) — On Trucks — Jakarta, Indonesia *December 2019 – March 2020*

- Integrated RESTful APIs with Retrofit including response and error handling within an Inventory Management Application.
- Collaborated with development team using Scrum to deliver features on schedule with debugging, testing, and performance optimization.

PROJECTS

AI-Powered Content Automation Pipeline — n8n Workflow — Personal Project *2026*

- Architected an end-to-end automation pipeline using n8n that generates AI images from text prompts and automatically converts them into promotional videos for affiliate marketing campaigns.

- Integrated AI image generation APIs and video synthesis tools into a seamless multi-step workflow triggered by webhooks, reducing manual content creation effort to near zero.
- Automated Google Drive storage for all generated media assets, enabling organized and scalable content delivery ready for product affiliate marketing distribution.
- Deployed the entire workflow stack on a self-hosted Docker environment with custom domain integration, ensuring production-grade reliability and uptime.

OpenClaw AI Agent — Crypto Monitoring & Personal Automation — Personal Project *2026*

- Configured and deployed an OpenClaw AI agent for real-time cryptocurrency price alert monitoring across multiple assets (BTC, ETH, SOL, BNB) and trading platforms.
- Built intelligent trading signal detection workflows to identify potential entry and exit opportunities based on market conditions and technical indicators.
- Implemented personal activity reminder and alarm automation to manage daily schedules and trading routines, demonstrating practical AI agent integration for productivity use cases.

E-Commerce AR — Augmented Reality Shopping Application — Lead Researcher & Developer — Published in JINTEKS Journal *2023 – 2024*

- Designed and developed a full-stack mobile e-commerce application integrating AR to allow users to virtually visualize products in their real-world environment before purchasing.
- Integrated AR SDKs for immersive 3D product visualization with a complete end-to-end checkout flow using SDLC Waterfall methodology.
- Conducted rigorous system evaluation using Blackbox and Whitebox testing; research findings published in JINTEKS (Jurnal Informatika Teknologi dan Sains) — jurnal.uts.ac.id/JINTEKS/article/view/4919

EDUCATION

Bachelor of Informatics — GPA 3.54 / 4.00 — Universitas Teknologi Yogyakarta — Yogyakarta, Indonesia *2021 – 2025*

CERTIFICATIONS

- Belajar Dasar AI — Dicoding Indonesia
- Memulai Pemrograman dengan Python — Dicoding Indonesia
- Belajar Machine Learning untuk Pemula — Dicoding Indonesia
- Belajar Fundamental Deep Learning — Dicoding Indonesia

SKILLS

AI / ML: Python, Machine Learning (Scikit-learn), Deep Learning Fundamentals, Prompt Engineering, LLM Integration

Automation & Workflow: n8n, API Orchestration, Webhook Integration, Docker, Event-driven Pipelines, Google Drive API

AI Tooling: Hermes AI Agent, OpenClaw AI Agent, AI Image Generation, AI Video Synthesis, Workflow Automation

Frontend & Web: Next.js, GSAP, Lenis (Smooth Scroll), HTML, CSS, Responsive Web Development

Mobile Development: Android SDK, Jetpack Components, MVVM Architecture, ViewModel, LiveData, Kotlin Coroutines, RxJava, Retrofit, REST API, Dependency Injection (Dagger/Koin)

Languages: Kotlin, Java, Python, C#, HTML, CSS

Tools & Platforms: Git, GitHub, Figma, Postman, Android Studio, Docker

Methodology: Agile, Scrum, SDLC, Sprint Planning, Code Review
